4816–7 SHAFT ASSY. (COUPLING)

HOW TO LOCATE COUPLING SHAFT and INTERMEDIATE COUPLING SHAFT PART NUMBERS

1. USE THE DRIVE LINE T.S.L. OR SHAFT STAMPED NUMBER IDENTIFICATION CROSS–REFERENCE GUIDE
   a. Refer to Section 46.1, page 6 for a Cross–Reference from stamped numbers on shaft or truck specification (T.S.L.) to service part numbers.

2. USE THE COUPLING SHAFT AND INTERMEDIATE COUPLING SHAFT APPLICATION CHART
   a. Refer to page 5 for the Coupling Shaft and Intermediate Coupling Shaft Application Chart Index.
   b. Manufacturer codes used in the rear axle column are Cross–Referenced as follows:
      E–Eaton R–Rockwell (Timken)

3. USE THE DRIVE AND COUPLING SHAFT COMPONENTS PARTS LIST
   a. When the service part number for the complete shaft assembly is known, the part number of the shaft sub–assembly and related components may be found in the Drive and Coupling Shaft Components Parts List in Section 46.1A.

4. COUPLING SHAFT AND INTERMEDIATE COUPLING SHAFT RELATED PARTS
   a. Coupling Shaft and Intermediate Coupling Shaft Related Parts are shown in Parts List Form starting on page 5 of this section. Refer to steps 1 and 2 to determine the appropriate parts list number.
   b. Coupling Shaft and Intermediate Coupling Parts Lists include the following items;

4635	Universal joint	4818	Retainer	4840	Bearing coupling shaft support
4805	Bearing baffle	4826	Bearing sleeve	4841	Slip yoke
4808	Center support	4835	Support bearing collar	4865	Flange rear u joint
				4866	Flange yoke

   Universal joints (4635), slip yokes (4841), flanges rear u–joint (4865) and flange yokes (4866) are also listed under their respective group numbers by type and size.
   c. Coupling shaft support plates (4831) are listed on the T.S.L. Code Section B21 and/or C01, obtain complete support plate number and use the Master Cross– Reference to cross support plate number to a service part number. The (4831) are also listed by code number with the related part number. For code to service number cross–reference refer to the Cross–Reference chart on page 2. To determine the appropriate part number of a support plate, refer to the Coupling Shaft and Intermediate Coupling Shaft Application Chart. Refer to page 5 of this section for the Application Chart Index.
   d. Coupling Shaft and Intermediate Coupling Shaft "Types", and the "A" and "B" designations are illustrated on page 4 of this section. Group 4816 applies to the Coupling Shaft only as shown on page 4 of this section.

5. USE THE DRIVE LINE ILLUSTRATIONS
   a. Refer to the "Typical" drive line illustrations on page 4 of Section 46.1 to obtain a group number.
   b. Refer to the group number in the catalog. Determine the part numbers needed from that group or follow cross–references to other groups to determine the part numbers needed.

6. USE THE ALPHABETICAL INDEX
   a. Refer to the alphabetical part name index at the beginning of this catalog to obtain a group number.
   b. Refer to the group number in the catalog. Determine the part number needed from that group or follow cross–references to other groups to determine the part numbers needed.

HOW TO FIND FRAME NUMBERS

1. USE MODEL APPLICATION CHART

Truck models are listed alphabetically beginning on page 4. Use the side rail type (see illustrations on page 2) and "Remarks" to select a frame for the wheelbase desired. Read all explanatory notes carefully as frame modification may be necessary. Orders for L–LN–LNT–LT–LTS heavy truck frames should include the vehicle serial number and model. These frames will be furnished with correct cross members and drilling.

2. USE MEASUREMENTS and PIERCED HOLE

a. Determine the Side Rail Type (see illustration on page 3).

b. Locate side rail pierced hole to determine Steel Type. Pierced holes are located as follows:
L–LN–LNT–LT–LTS Series–10" behind front of frame–hole acts as clearance hole for strg. gear adj. screw

c. Measure Dimensions A to H and refer to Identification Chart on page 3 to determine frame section modulus●

d. Refer to model application chart beginning on page 4 to locate frame required. Explanatory notes will advise if further modification is necessary. Orders for L–LN–LNT–LT–LTS heavy truck frames should include the vehicle serial number and model. These frames will be furnished with correct cross members and drilling.

3. USE SECTION MODULUS●

a. Frames can be identified by the section modulus and P.S.I. which are shown in the Truck Data Book.

b. Section modulus is also shown in the Model Application Chart beginning on page 4 to aid in frame selection.

● "Frame section modulus" is the engineering term that indicates, for comparative purposes, the relative strength of two or more frames of the same supported length, shape and material. All other things being equal, the frame with the largest section modulus will have the greatest strength and stiffness, i.e., the ability to more effectively resist sagging under full loads. It takes into account frame depth, flange width and material thickness. "P.S.I." designates pounds of yield strength per square inch.

EXHAUST SYSTEMS MODEL APPLICATION CHART

How to find the part number for a component part of an exhaust system:

1. Find the truck model in the alphabetical Model Application Chart which starts below.
2. Find the Parts List Number for your unit.
3. Turn to the Parts List which follows the Application Chart and find the component needed.

(PARTS are LISTED from FRONT to REAR
. . .OR. . .
BOTTOM to TOP of the EXHAUST SYSTEM)

EXAMPLE: To find a muffler for a 1973 B600 with 300 gas engine and 198 W/B, look first in the Model Application Chart for B600. Next, find "G" for "gas engine", "300" for 300 C.I.D. and "198" for the wheelbase listed under model B600. Parts List 128 shows exhaust system parts for the model. Turn to Parts List 128 and find part number C3TZ 5230–B for the muffler.

HOW TO FIND A FRONT SPRING PART NUMBER

1. USE THE TRUCK SPECIFICATION LIST (T.S.L.)
   a. Find the Front Spring Number which appears on the T.S.L.
   b. Refer to the Front Spring T.S.L.Cross–Reference Guide on page 2 to determine the service part number which corresponds to the T.S.L. number.
   c. After locating a service part number, refer to group 5313 for available leaves.
2. USE THE SPRING IDENTIFICATION MARKING
   a. Find the stamped number which appears on the spring.
   b. Refer to the Front Spring T.S.L. Cross–Reference Guide on page 2 to determine the correct service part number.
   c. After locating a service part number, refer to group 5313 for available leaves.
   d. The identification marking also appears in the Model Application Chart (on page 4).
3. USE THE MODEL APPLICATION CHART
   a. Determine the year and model of the truck. (In addition, it may be necessary to know the number of leaves or the spring identification marking).
   b. Refer to the Model Application Chart (starting on page 4 of this section) to determine the correct service part number.
   c. After locating a service part number, refer to group 5313 for available leaves.
   d. SPRING RATING
   There are two methods of describing spring ratings currently used in the trucking industry. They are (1) rating at the pad, and (2) rating at the ground. Both ratings are expressed in pounds. (Rating at Pad:) This figure represents the amount of weight above the pad which can actually be supported by the springs. This incl. the springs. This incl. the springs, chassis, body, and payload weights.
   (Rating at Ground:) This figure incl. the rating at pad plus the weight of components between the spring pad and ground. These components incl. axle, brakes, tires and wheels.
4. USE THE FRONT SPRING SIZE CHART
   Refer to the Chart on page 2 and determine the correct service part number by using the spring "type" and dimension shown.

5560 SPRING ASSY. (REAR)

1. USE THE TRUCK SPECIFICATION LIST (T.S.L.)
   a. Find the rear spring number which appears on the T.S.L.
   b. Refer to the Rear Spring T.S.L. Cross–Reference Guide (below) to determine the service part number which corresponds to the T.S.L. number.
   c. For Tandem models, the spring is a part of the Tandem Suspension Assembly. Find the number shown on the T.S. for Tandem Suspension Assembly (R.H. and L.H.), then refer to that Parts List in group 5888 to find a spring service number.
   d. After locating a service part number, refer to group 5563 for available leaves.

USE THE SPRING STAMPING NUMBER
   a. Find the stamped number which appears on the spring.
   b. Refer to the Rear Spring T.S.L. Cross–Reference Guide (page 2) to determine the correct service part number.
   c. After locating a service part number, refer to 5563 for available leaves.

3. USE THE REAR SPRING MODEL APPLICATION CHART
   a. Determine the year and model of the truck. (In addition, it may be necessary to know the number of leaves, axle capacity, and rear axle type.)
   b. Refer to the Rear Spring Model Application Chart (starting on page 4 of this section) to determine correct service part number.
   c. After locating a service part number, refer to group 5563 for available leaves.
   d. Spring Rating
      There are two methods of describing spring ratings currently used in the trucking industry. They are (1) rating at the pad, and (2) rating at the ground. Both ratings are expressed in pounds.
      (RATING AT PAD): This figure represents the amount of weight above the pad which can actually be supported by the springs. This incl. the chassis, body and payload weight.
      (RATING AT GROUND): This figure incl. the rating at pad plus the weight of components between the spring pad and ground. These components incl. axle, brakes, tires and wheels.

4. USE THE REAR SPRING SIZE CHART
   Refer to the Chart on page 3 and determine the correct service part number by using the spring "type" and dimensions shown.

HOW TO FIND A SERVICE PART NUMBER FOR AN AUXILIARY SPRING

1. USE THE PHYSICAL DIMENSIONS
   a. Refer to the chart (below) and the illustration (below) to find a service part number with dimensions which match those desired.
   b. After locating a spring service number, refer to group 5589 for available leaves.
2. USE THE STAMPING NUMBER
   a. Find a stamping number on the spring.
   b. Refer to the chart (below) to find a service part number which corresponds to the stamping number.
   c. After locating a spring service number, refer to group 5589 for available leaves.
3. USE THE MODEL and YEAR OF THE TRUCK
   a. Determine the year and model of the truck. (It may also be necessary to know the rear axle capacity and manufacturer.
   b. Refer to the Model Application Chart in group 5560 to find the service part number.
   c. After locating a spring service number, refer to group 5589 for available leaves.
