

# Diagnosis Test Results :

## Possibility 1 ▶ Status: OK

No actual or stored errors stored in the specific control unit.

## Possibility 2 ▶ Status: Error

Errors stored in the error memory.

## Possibility 3 ▶ Status: No Communication

Verify if the specific control unit is build in into the car. Otherwise verify the cable connection to the computer and to the car. Also verify the battery power of the vehicle.

The control unit information is displayed, when the status is either OK or if there is an Error Stored.
