Onan[®]

short block assemblies

JANUARY, 1975

<http://stores.ebay.com/UsefulCDs>

This guide is prepared in alphabetical sequence by model series. Example: "AJ series", AK series" etc. Within the alphabetical sequence the models are in numerical sequence. Example: 2.5AJ-1R/1, 2.5AJ-1R/13.

Whenever a major overhaul is required, carefully consider the advantages (time, labor and material) of using a new, factory-assembled short block. Using factory assembled short blocks will often save valuable dollars, as compared to the time needed for reboring, grinding and the added cost of oversize parts.

The Onan Parts department has established an inventory of the fast-moving short blocks for your convenience. Lead time for delivery on non-stock short blocks will be approximately ten (10) days.

Prior to 1969, Onan Model Designation did not use a decimal in the kW rating. EXAMPLE: 6.0CCK was formerly 6CCK. All models are now listed using the decimal system.
